EXPERIENCE

Member of technical staff (Aug 2021 - Present)

Mindstix software labs –
- Work on an American multi-level marketing **ecommerce** company that sells beauty, health and home care products.
- Optimised performance of search feature in ecommerce application.
- Did state management with redux and added / removed state dynamically with redux dynamic module.
- Built and integrated Product details page, Product listing and Promotion pages according to user roles.
- Developed configurable Product card used by different teams
- Built multiple configurable Brand components, accordion, toast message components etc
- Used material UI, react slick, storybook and managed shared UI and shared function components.
- Worked with Next JS, **Micro-Frontend Architecture** with CodeArtifact.
- Made shopping FAQ system with dynamic routing.

PROJECTS

Ecommerce - full stack application

PERN stack app which allows users to login/sign up, browse products by Category and sort by price, allows to add products in cart and checkout. Every transaction in this web app is made on a database, so you can access your state from any device.
- **Technology used**: HTML/CSS, JavaScript, API, React js, Redux toolkit, Node js, Express js, PostgreSQL, postman, heroku
  - Code
  - Live Project

Budget Tracker

a budgeting and expense tracking app. The app allows you to set budgets for various categories, and track transactions in those categories. It then sums your spending in each category to calculate the amount of money that remains to be spent.
- **Technology used**: HTML/CSS, JavaScript, React js , Redux toolkit
  - Code
  - Live Project

To-do List

To-do application that makes all crud operations. This app allows users to create, read, update and delete the to-do which is created with description and the date when user wants to complete it.
- **Technology used:** HTML/CSS, JavaScript, API, React js, Express js, Node js, PostgreSQL.
  - Code
  - Live Project
